

Project - 3 : Dice Game Using JS DOM

Take a view of following Image and create a Dice game as per its designed

Techstacks needs to be used :

HTML

CSS - Flexbox

Javascript

Dice Game Rules

- Randomly set any one player to start the game
- Once dice is rolled corresponding number should be added with corresponding player score
- Once a player rolled a dice his roll option should set to disabled till other person rolls & its vice versa
- Player who scored 30 points first will considered as winner
- After a player wins a game is set to disabled mode and reset button needs to be clicked to start the new game
